# David Egbakou

davidegbakou@gmail.com | +33 6 29 55 64 80 | github.com/davekg8 | Paris, France

## Profile

Engineering student in Computer Science at CY Tech, passionate about **Data Science**, **Data Analysis**, and **Artificial Intelligence**. Autonomous, curious, and rigorous, I am seeking a **3-month internship in Computer Science starting June 2026** to apply my skills in predictive modeling, data visualization, and decision support system development.

## Experience

**DHL Express** France
*Junior Data Engineer (Apprenticeship)* *2025 – 2027*

- Orchestrated ETL pipelines on **Snowflake** using **Dataiku DSS** and **SQL** (Push-Down Computation) to process over 3 million rows of logistic data.
- Built a hybrid forecasting engine using **Prophet** (Global level, **<3% SMAPE**) and **DeepAR** (Agency level), incorporating custom feature engineering (holiday impacts, seasonality).
- Designed a dynamic **Zip Code mapping algorithm** and a **Tier-based segmentation strategy** to resolve network inconsistencies and optimize agency targeting.
- Deployed **PowerBI** dashboards for operational steering, translating complex data into actionable insights for Field Ops and Management (Data Storytelling).

## Education

**CY Tech** Cergy, France
*Engineering Degree in Computer Science (Specialization: Data & AI)* *2024 – 2027*
**Lycée Technique Errazi** El Jadida, Morocco
*Preparatory Classes (CPGE - MPSI/MP)* *2022 – 2024*

- Intensive foundation degree in Mathematics and Physics.

**Lycée Scientifique de Lomé** Lomé, Togo
*Scientific Baccalaureate (Option: Mathematics and Physics)* *2022*

## Projects

**Mini Actor Framework (Akka-like)** | *Java, Multi-threading, Concurrency* Oct 2025 – Dec 2025

- Designed and implemented a lightweight actor model framework inspired by **Akka** to handle concurrent computations.
- Developed core mechanisms for asynchronous message passing (mailboxes) and actor lifecycle management.
- Ensured thread safety and efficient task execution using Java's concurrency utilities (Executors, Locks).

**Emergency Shelter Management App** | *Java, PostgreSQL, MVC* May 2025

- Developed a full-stack Java application implementing the **MVC** architectural pattern.
- Integrated a **PostgreSQL** database via JDBC for reliable data persistence.
- Deployed the database on a cloud server to enable remote access and management.

**Machine Learning for Game of Nim** | *Python, Reinforcement Learning* Jan 2024 – Apr 2024

- Developed an intelligent agent based on **Q-Learning** to master the game of Nim.
- Optimized hyperparameters and evaluated agent performance against random and heuristic strategies.
- Visualized training results and game states using **Matplotlib**.

## Skills

**Programming**: Python, SQL, Java, R, Shell (PowerShell)
**Data Science**: NumPy, Pandas, Scikit-learn, Dataiku DSS, Prophet, DeepAR
**Platforms & DBs**: Snowflake, PostgreSQL, MySQL, JDBC, Git, GitHub
**Tools**: PowerBI, Excel (Advanced), Jupyter Notebook
**Soft Skills**: Data Storytelling, Technical Vulgarization, Stakeholder Management, Problem Solving
**Languages**: French (Native), English (Upper Intermediate - B2)

## CERTIFICATIONS

OpenClassrooms: Python Libraries for Data Science
OpenClassrooms: Master the Fundamentals of Excel
OpenClassrooms: Manage a Digital Project with Waterfall Methodology
